

A new urban logistics model for enhancing the sustainability of cities

How?
Providing 4 governance schemes for urban planning policies

1

User demand planning

Promoting more citizen centred and socially inclusive logistics services

2

Transport planning

Developing a smart network operator, as a control tower supported on an ICT Platform

4

City infrastructure focused

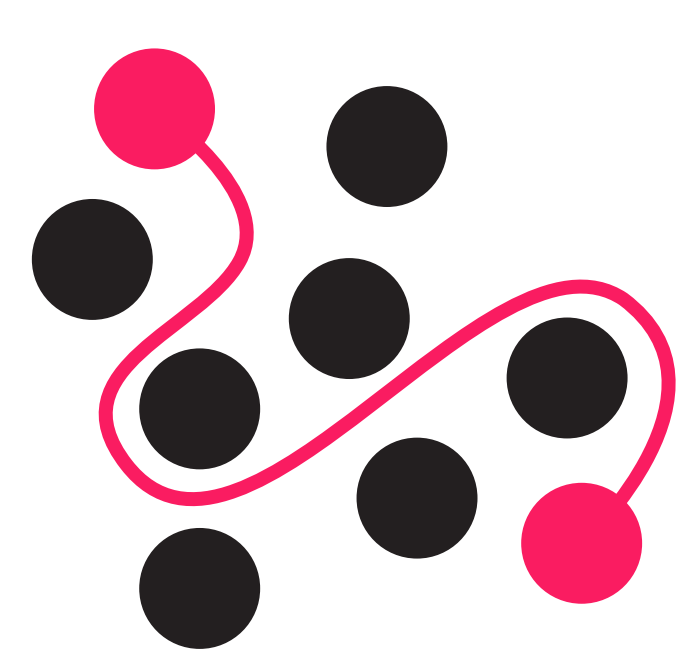

Improving air quality and helping to create sustainable cities

3

Freight & Logistics planning

Constituting an effective mean of collaboration between agents
